

GreenBridge[™]2 Series of High-Efficiency Bridge Rectifiers

FDMQ8205

General Description

FDMQ8205 is GreenBridge 2 series of quad MOSFETs for a bridge application so that the input will be insensitive to the polarity of a power source coupled to the device. Many known bridge rectifier circuits can be configured using typical diodes. The conventional diode bridge has relatively high power loss that is undesirable in many applications. Especially, Power over Ethernet (PoE) Power Device (PD) application requires high–efficiency bridges because it should be operated with the limited power delivered from Power Source Equipment (PSE) which is classified by IEEE802.3at. FDMQ8205 is configured with low R_{DS(on)} dual P–ch MOSFETs and N–ch MOSFETs so that it can reduce the power loss caused by the voltage drop, compared to the conventional diode bridge. FDMQ8205 enables the application to maximize the available power and voltage and to eliminate the thermal design problems in PoE PD applications.

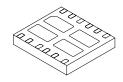

FDMQ8205 GreenBridge 2 is compatible with IEEE802.3at PoE standard by not compromising detection and classification requirement as well as small backfeed voltage.

Features

- Low Power Loss GreenBridge Replaces Diode Bridge
- Self Driving Circuitry for MOSFETs
- Low R_{DS(on)} 80 V Rated MOSFETs
- Maximizing Available Power and Voltage
- Eliminating Thermal Design Problems
- IEEE802.3at Compatible
 - Meet Detection and Classification Requirement
 - Work with 2 and 4-pair Architecture
 - Small Backfeed Voltage
- Compact MLP 4.5 x 5 Package
- These Device is Pb–Free and Halogen Free.

Applications

- Power over Ethernet (PoE) Power Device (PD)
 - IP Phones
 - Network Cameras
 - · Wireless Access Points
 - ◆ Thin Clients
 - Microcell
 - Femtocell

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

2. $R_{\theta JA}$ is determined with the device mounted on a 1 in² pad 2 oz copper pad on a 1.5 x 1.5 in. board of FR–4 material. $R_{\theta JC}$ is guaranteed

by design while $R_{\theta CA}$ is determined by the user's board design.

a. 50°C/W when mounted on a 1 in² pad of 2 oz copper, the board designed Q1 + Q3 or Q2 + Q4.

b. 160°C/W when mounted on a minimum pad of 2 oz copper, the board designed Q1 + Q3 or Q2 + Q4.

3. Pulse Id measured at td \leq 300 μ s, refer to SOA graph for more details.
