

Ultra Low Power, 14V, 200mA Low-Dropout Linear Regulator

General Description

The RT9064 is a low-dropout (LDO) linear regulator that features high input voltage, low dropout voltage, ultra-low operating current, and miniaturized packaging. With quiescent current as low as 2 μ A, the RT9064 is ideal for battery-powered equipment.

The RT9064's stability requirements are easily met with all types of output capacitors, including tiny ceramic capacitors, over its wide input range (3.5V to 14V) and its load current range (0mA to 200mA). The RT9064 offers standard output voltages of 2.5V, 3.3V and 5V.

Pin Configurations

Features

- 2 μ A Quiescent Current
- $\pm 2\%$ Output Accuracy
- 200mA Output Current
- 14V Maximum Operating Input Voltage
- Dropout Voltage : 0.4V at 100mA
- Fixed Output Voltage : 2.5V/3.3V/5V
- Stable with Ceramic or Tantalum Capacitor
- Current Limit Protection
- Over-Temperature Protection
- SOT-23-3, SOT-89-3 Packages
- RoHS Compliant and Halogen Free

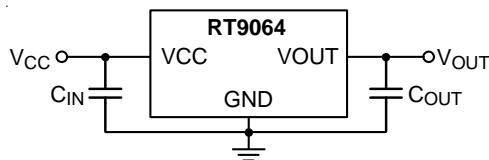

Applications

- Portable, Battery Powered Equipment
- Ultra Low Power Microcontrollers

Ordering and Marking Information

Part Number	Output Voltage	Package	Marking Information
RT9064-25GV	2.5V	SOT-23-3	0D=
RT9064-25GVN		SOT-23-3 (N)	30=
RT9064-25GX		SOT-89-3	04=
RT9064-33GV	3.3V	SOT-23-3	0E=
RT9064-33GVN		SOT-23-3 (N)	2Z=
RT9064-33GX		SOT-89-3	05=
RT9064-50GV	5.0V	SOT-23-3	0F=
RT9064-50GVN		SOT-23-3 (N)	2Y=
RT9064-50GX		SOT-89-3	06=

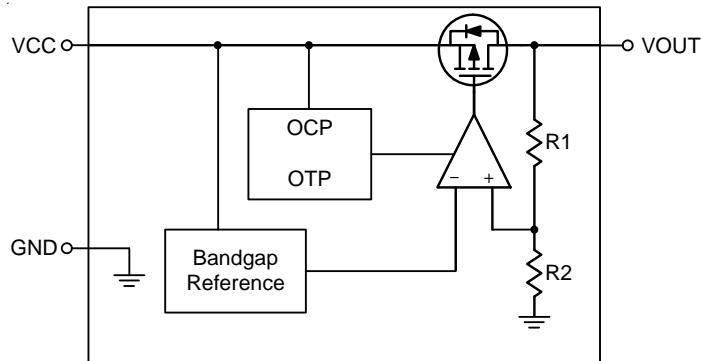

Simplified Application Circuit

Functional Pin Description

Pin No.			Pin Name	Pin Function
SOT-23-3	SOT-23-3 (N-Type)	SOT-89-3		
1	3	1	VCC	Supply Voltage Input.
2	2	3	VOUT	Output of the Regulator.
3	1	2	GND	Ground.

Function Block Diagram

Operation

The RT9064 is a high input voltage linear regulator specifically designed to minimize external components.

The minimum required output capacitance for stable operation is 1 μ F effective capacitance after consideration of the temperature and voltage coefficient of the capacitor.

Output Transistor

The RT9064 includes a built-in low on-resistance P-MOSFET output transistor for low dropout voltage applications.

Error Amplifier

The Error Amplifier compares the output feedback voltage from an internal feedback voltage divider to an internal reference voltage and controls the P-MOSFET's gate voltage to maintain output voltage regulation.

Current Limit

The RT9064 provides a current limit function to prevent damage during output over-load or shorted-circuit conditions. The output current is detected by an internal sensing transistor.

Over-Temperature Protection

The over-temperature protection function will turn off the P-MOSFET when the internal junction temperature exceeds 150°C (typ.) and the output current exceeds 30mA. Once the junction temperature cools down by approximately 20°C, the regulator will automatically resume operation.

Absolute Maximum Ratings (Note 1)

• VCC to GND -----	-0.3V to 15V
• VOUT to VCC -----	-14V to 0.3V
• VOUT to GND -----	-0.3V to 6V
• Power Dissipation, P_D @ $T_A = 25^\circ\text{C}$	
SOT-23-3 -----	0.41W
SOT-89-3 -----	0.59W
• Package Thermal Resistance (Note 2)	
SOT-23-3, θ_{JA} -----	243.3°C/W
SOT-89-3, θ_{JA} -----	167.7°C/W
• Lead Temperature (Soldering, 10 sec.) -----	260°C
• Junction Temperature -----	150°C
• Storage Temperature Range -----	-65°C to 150°C
• ESD Susceptibility (Note 3)	
HBM (Human Body Model) -----	2kV
MM (Machine Model) -----	200V

Recommended Operating Conditions (Note 4)

• Supply Input Voltage, VCC -----	3.5V to 14V
• Junction Temperature Range -----	-40°C to 125°C
• Ambient Temperature Range -----	-40°C to 85°C

Electrical Characteristics($(V_{OUT} + 1V) < V_{CC} < 14V$, $T_A = 25^\circ\text{C}$, unless otherwise specified.)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Output Voltage Range	V_{OUT}		2.5	--	5	V
DC Output Accuracy		$I_{LOAD} = 1\text{mA}$, $V_{CC} = V_{OUT} + 0.5\text{V}$	-2	--	2	%
Dropout Voltage	V_{Drop}	$I_{LOAD} = 100\text{mA}$, $V_{OUT} \geq 4.5\text{V}$	--	0.4	1.2	V
		$I_{LOAD} = 100\text{mA}$, $V_{OUT} < 4.5\text{V}$	--	--	1.5	
Quiescent Current	I_Q	$V_{CC} = 5\text{V}$, $I_{LOAD} = 0\text{A}$	--	2	4	μA
Line Regulation	V_{LINE}	$I_{LOAD} = 1\text{mA}$, $3.5\text{V} \leq V_{CC} < 5.5\text{V}$	--	0.1	0.2	%
		$I_{LOAD} = 1\text{mA}$, $5.5\text{V} \leq V_{CC} \leq 14\text{V}$	--	0.1	0.3	
Load Regulation	V_{LOAD}	$I_{LOAD} = 1\text{mA}$ to 200mA	--	0.5	1	%
Output Current Limit	I_{LIM}	$V_{OUT} = 0.5 \times V_{OUT}(\text{Normal})$, $V_{CC} = 5\text{V}$	240	320	400	mA
Power Supply Rejection Ratio	PSRR	$f = 100\text{Hz}$, $I_{LOAD} = 100\text{mA}$	--	-60	--	dB
		$f = 10\text{kHz}$, $I_{LOAD} = 100\text{mA}$	--	-40	--	
Output Noise Voltage	V_{ON}	$BW = 10\text{Hz}$ to 100kHz , $C_{OUT} = 1\mu\text{F}$	--	$27 \times V_{OUT}$	--	μVRMS
Startup Time	t_{STR}	$V_{OUT} = 3\text{V}$, $R_L = 30\Omega$	--	500	--	μs
OTP Threshold			--	150	--	$^\circ\text{C}$
OTP Hysteresis			--	20	--	$^\circ\text{C}$

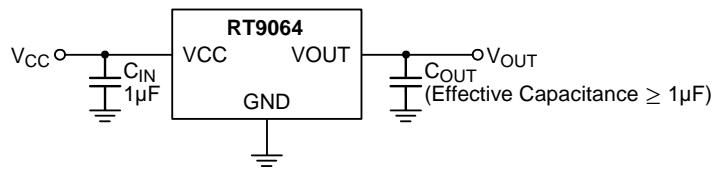

Note 1. Stresses beyond those listed "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions may affect device reliability.

Note 2. θ_{JA} is measured at $T_A = 25^\circ\text{C}$ on a high effective thermal conductivity four-layer test board per JEDEC 51-7.

Note 3. Devices are ESD sensitive. Handling precaution is recommended.

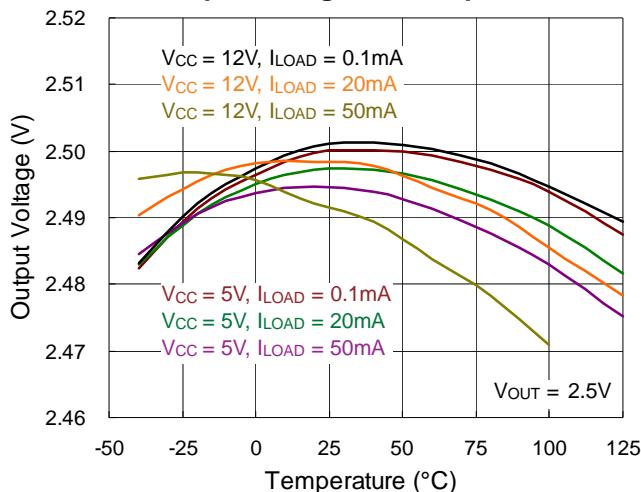

Note 4. The device is not guaranteed to function outside its operating conditions.

Applications Information

Like any low dropout linear regulator, the RT9064's external input and output capacitors must be properly selected for stability and performance. Use a 1 μ F or larger input capacitor and place it close to the IC's VCC and GND pins.

Any output capacitor meeting the minimum 1m Ω ESR (Equivalent Series Resistance) and effective capacitance larger than 1 μ F requirement may be used. Place the output capacitor close to the IC's VOUT and GND pins. Increasing capacitance and decreasing ESR can improve the circuit's PSRR and line transient response.

Thermal Considerations

For continuous operation, do not exceed absolute the maximum junction temperature. The maximum power dissipation depends on the thermal resistance of the IC package, PCB layout, rate of surrounding airflow, and the allowed difference between the junction and ambient temperatures. The maximum power dissipation can be calculated by the following formula :

$$P_{D(MAX)} = (T_{J(MAX)} - T_A) / \theta_{JA}$$

where $T_{J(MAX)}$ is the maximum junction temperature, T_A is the ambient temperature, and θ_{JA} is the junction to ambient thermal resistance.

The recommended operating conditions specify a maximum junction temperature is 125°C. The junction to ambient thermal resistance, θ_{JA} , is layout dependent. On a standard JEDEC 51-7 four-layer thermal test board, the thermal resistance, θ_{JA} , of the SOT-23-3 package is 243.3°C/W. For the SOT-89-3 package, the θ_{JA} , is 167.7°C/W. The maximum power dissipation at $T_A = 25^\circ\text{C}$ can be calculated by the following formula :

$$P_{D(MAX)} = (125^\circ\text{C} - 25^\circ\text{C}) / (243.3^\circ\text{C}/\text{W}) = 0.41\text{W} \text{ for SOT-23-3 package}$$

$$P_{D(MAX)} = (125^\circ\text{C} - 25^\circ\text{C}) / (167.7^\circ\text{C}/\text{W}) = 0.59\text{W} \text{ for SOT-89-3 package}$$

For a fixed $T_{J(MAX)}$ of 125°C, the maximum power dissipation depends on the operating ambient temperature and the package's thermal resistance, θ_{JA} . The derating curve in Figure 1 shows the effect of rising ambient temperature on the maximum recommended power dissipation.
