

SLG59H1302C

A Surge-protected, 28 V Tolerant Power Splitter in WLCSP

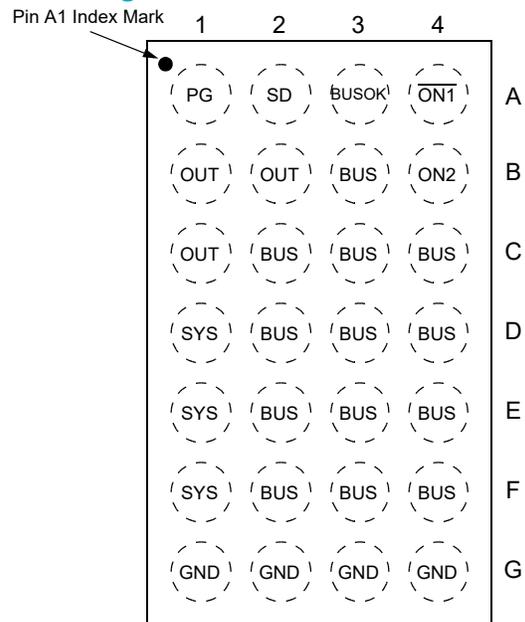

General Description

The SLG59H1302C is a 130-V surge-protected, 28-V tolerant power splitter with two high-current switches and a 0.1 A capable LDO in 28-ball WLCSP. With independent control for each channel, the SLG59H1302C contains a 6 A capable, 12 mΩ nFET switch for the BUS-to-OUT path and a reverse-blocking 6 A capable, 24 mΩ nFET switch for the BUS-to-SYS path. An internal, “always ON” LDO is 0.1 A capable and can be used to supply power to downstream devices when the BUS terminal voltage is higher than 2.7 V. When the SYS terminal turns on, the IC’s push-pull PG output becomes asserted. The SLG59H1302C is fully specified over the industrial -40 °C to 85 °C temperature range.

Features

- 130 V-tolerant TVS (IEC61000-4-5)
- BUS-to-OUT nFET: 12 mΩ/6 A, 28 V tolerant
- BUS-to-SYS nFET: 24 mΩ/6 A B2B RB
- Always ON, BUS LDO: ±10% tol, 0.1 A capable
- BUS UVLO & OVLO Protection
 - OVP Response Time: 200 ns
- Push-pull PG (Power Good) Output
- Thermal Shutdown Protection
- Active-HIGH IC Shutdown Input
- Active-LOW $\overline{\text{ON1}}$ Input (BUS-to-OUT)
- Active-HIGH ON2 Input (BUS-to-SYS)
- 28-ball CSP, 2.98 x 1.69 x 0.44 mm, 0.4 mm pitch
- Pb-Free / Halogen-Free / RoHS Compliant Packaging

Pin Configuration

Pin Description

Pin Name	Pin #	Type	Pin Description
BUS	B3, C2, C3, C4, D2, D3, D4, E2, E3, E4, F2, F3, F4	Input	IC power supply and power switch input (13 contacts)
OUT	B1, B2, C1	Output	Power switch output to Load (3 contacts)
SYS	D1, E1, F1	Output	Power switch output to VBAT (3 contacts)
BUSOK	A3	Output	Always ON fixed output voltage from internal LDO
ON2	B4	Digital Input	BUS-to-SYS Switch Enable; Asserted active high digital input; 1 M Ω pull-down
$\overline{\text{ON1}}$	A4	Digital Input	BUS-to-OUT Switch Enable; Asserted active low digital input; 1 M Ω pull-down
SD	A2	Digital Input	IC shutdown; asserted active high; 1 M Ω pull-down
PG	A1	Digital Output	Asserted active-high push-pull output.
GND	G1, G2, G3, G4	GND	Analog GND (4 contacts)

Note: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Layout Guidelines:

1. Since the BUS, SYS and OUT pins dissipate most of the heat generated during high-load current operation, it is highly recommended to make power traces as short, direct, and wide as possible. A good practice is to make power traces with absolute minimum widths of 15 mils (0.381 mm) per Ampere. A representative layout, shown in [Figure 1](#), illustrates proper techniques for heat to transfer as efficiently as possible out of the device;
2. To minimize the effects of parasitic trace inductance on normal operation, it is recommended to connect input C_{IN} and output C_{LOAD} low-ESR capacitors as close as possible to the SLG59H1302C's BUS, SYS and OUT pins;
3. The GND pin should be connected to system analog or power ground plane.

SLG59H1302C Evaluation Board:

A HFET1 Evaluation Board for SLG59H1302C is designed according to the statements above and is illustrated on [Figure 1](#). Please note that evaluation board has BUS_Sense, SYS_Sense and OUT_Sense pads. They cannot carry high currents and dedicated only for RDS_{ON} evaluation. evaluation.

EVB Configuration

1. Set SD to GND;
2. Connect oscilloscope probes to VBUS, VOUT, VSYS, ON1, ON2, etc.;
3. Turn on Power Supply and set desired VBUS from 2.7 V ... 13.3 V;
4. Toggle the ON1 signal High or Low to test SLG59H1302C's OUT rail operation;
5. Toggle the ON2 signal High or Low to test SLG59H1302C's SYS rail operation;
