

Output rail-to-rail very low noise operational amplifier

Features

- Rail-to-rail output voltage swing $\pm 2.4V @ V_{CC} = \pm 2.5V$
- Very low noise level: $4nV/\sqrt{Hz}$
- Ultra low distortion: 0.003%
- High dynamic features: 12MHz, $4V/\mu s$
- Operating range: 2.7V to 10V
- ESD protection (2kV)
- Latch-up immunity (class A)

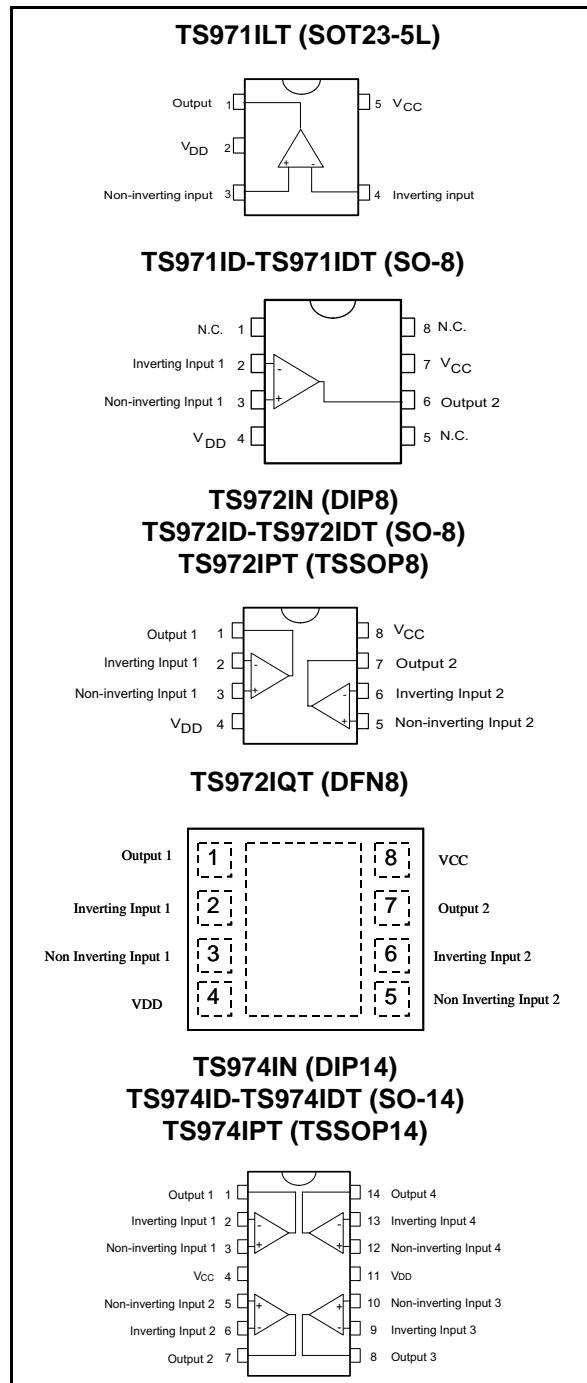

Applications

- Portable equipment (CD players, PDA)
- Portable communications (cell phones, pagers)
- Instrumentation & sensing
- Professional audio circuits

Description

The TS97x family of operational amplifiers operates with voltages as low as $\pm 1.35V$ and features output rail-to-rail signal swing. The TS97x are particularly well suited for portable and battery-supplied equipment. Very low noise and low distortion characteristics make them ideal for audio pre-amplification.

The TS971 is available in a variety of packages to suit all types of applications. For applications where space-saving is critical, the SOT23 package ($2.8 \times 2.9mm$) or the DFN package ($3 \times 3mm$) simplify the board design because they can be placed everywhere.

1. All voltage values, except differential voltage are with respect to network ground terminal.
2. Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.
3. The magnitude of input and output voltages must never exceed $V_{CC} +0.3V$.
4. Short-circuits can cause excessive heating and destructive dissipation. Values are typical.
5. Human body model: A 100pF capacitor is charged to the specified voltage, then discharged through a $1.5k\Omega$ resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.
6. Machine model: A 200pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor $< 5\Omega$). This is done for all couples of connected pin combinations while the other pins are floating.
7. Charged device model: all pins and the package are charged together to the specified voltage and then discharged directly to the ground through only one pin. This is done for all pins.

No value specified for CDM on SOT23-5 package.

3 Package information

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
